CERTIFICATION

Tenö Dockyard's operations are certified to the ISO14001 eco-management standard in accordance with ISO 9001 and the working environment in accordance with OHSAS 18001 and AFS 2001:1.

Our management system ensures that our qualified and motivated employees enjoy a good working environment, aiming for a steady increase in customer satisfaction and

minimal environmental impact in aid of a sustainable development.

Tenö Dockyard also meets a wide range of additional standards necessary to remain competitive in the industry.

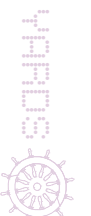

QUALITY

Tenö is a well-established dockyard dating from the 1960s. The high levels of competence, professional skills and experience of our staff, combined with our modern technical equipment, ensures the highest quality of work in all our service areas.

ENVIRONMENT/ENVIRONMENTAL POLICY

Tenö is the first dockyard in Sweden certified to ISO 14001. We operate in a sensitive area of the archipelago, and therefore feel a great responsibility to ensure that our activities affect the environment as little as possible. For example, Tenö Dockyard has its own treatment plant, where sewage, waste, rainwater and meltwater from the dockyard area is cleansed. All environmentally harmful substances are removed and destroyed in situ or transported to another facility for destruction.

Our policy is that we should reduce, or if possible avoid, any negative environmental impact in connection with our activities or our selection of products, while working for the development of more environment-friendly technological solutions.
